

APPLICATIONS

- For static payment applications allowing ease of use for all

BENEFITS

- Ensures compliance with local accessibility legislation
- Compatible with our standard SpacePole range
- Add ClickSafe[®] for added security
- Reflects PCI best practice recommendations

Bring your payment solution in reach for everyone

Excellence in customer service is not a 'nice to have'. It defines the retail experience and is a driver for customer loyalty in today's 24/7 multichannel world. Ensuring accessibility for all is a vital part of that experience and it is one that is also defined by legislation.

Ergonomic Solutions is introducing the SpacePole Accessibility Arm, which answers the need for all people to be able to comfortably use payment terminals for purchasing transactions. Combined with our SpacePole payment mounting solutions, the accessibility arm is easy to use. Both the operator or user can simply lower or raise the payment terminal to the appropriate height by moving a lever that controls the arm.

For added peace of mind, the fitting of a ClickSafe security tether is a visual deterrent to any opportunistic act of theft. As with all SpacePole payment solutions, the accessibility arm ensures compliance with the latest PCI directives on physical security at the point of sale.

The accessibility arm is also compatible with our SpacePole Essentials product line, which forms the basis of our payment mounting solutions, creating an ergonomic and easy to use solution for all.

SpacePole Accessibility Arm – excellence in customer service for all
