COMPATIBILITY

- Verifone E355
- Ingenico iSMP4
- Ingenico Link/2500

SpacePole Solo - enable both static and mobile payment solutions across the store, with one payment device

With customers used to the multichannel buying process where the purchase is ordered online and paid for or collected in-store, agility is the key to providing the bricks and mortar customer experience that is now demanded.

The new SpacePole Solo charging cradle is a secure mounting solution for static payment transactions with quick release and easy removal for mobile payments. This enables the payment terminal to be used as part of an mPOS solution in conjunction with the recently launched OpenSpace Duo[™] platform, for example.

Answering that need for agility, SpacePole Solo maximises the usage of those marketing leading payment devices with which it is compatible. The latest Kensington push-lock, developed for Ergonomic Solutions, provides for physical security for the payment terminal in line with PCI best practice. SpacePole Solo is compatible with the SpacePole range of payment mounting solutions developed by Ergonomic Solutions. With over 7 million installations worldwide, it has a pedigree to be proud of.

SpacePole Solo – defining customer service
